eurosender

Eurosender

Eurosender is a platform through which logistics companies and shippers from all over the world are connected. It is based on the technology of instantaneous calculation of final prices of door-to-door shipping services in Europe. The shipping price choices depend on three factors: the number of packages, their weight and the route. The platform provides access to the best carriers at attractive prices and also offers its services in logistics process management.

CHALLENGE

Because of their activity, Eurosender has a significant amount of data. This leads them to have a problem of slowness that proves to be inconvenient in the daily use of the Odoo interface. The platform, with the increasing evolution of its data, is obliged to anticipate for the future and to find a sustainable solution to manage its database with peace of mind.

SOLUTION

Eezee-It undertook an in-depth analysis of the platform's flows in order to identify bottlenecks and implement a strategy to ensure that data processing no longer slows down the interface. The exploration is ongoing!
